Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Madaj, et al. (US 5889068 A) in view of Simpson (US 5733945).

See entire document. Madaj, et al. disclose a urethane catalyst comprising preferred catalyst metals are tin, lead, iron, bismuth and mercury (col. 8, l. 27-29) and one exemplary organometallic compound is tin ethyl hexanoate (col. 8, l. 30).

Furthermore isocyanates (col. 5, l. 12-36), bicyclic tertiary amines (col. 8, l. 51-col. 9, l. 16) and quaternary ammonium salts (col. 8, l. 51-col. 9, l. 16) are disclosed as part of the reaction with polyether polyols (col. 5, l. 37-col. 7, l. 51) to produce urethane foam (col. 18, l. 38-39). Organometallic catalyst is disclosed in an amount ranging from 0.005 – 0.5% by weight (col. 9, l. 17-28). Although Madaj, et al. do not specifically

disclose the specific metal (acetyl acetonate - acac) catalyst claimed, Simpson discloses all metals except Hf and Th of said catalyst (col. 2, l. 63-64; col. 6, l. 6-30) which are the equivalent to or preferred over the tin ethyl hexanoate catalyst (col. 2, l. 4-15) therefore, curing the deficiency of Madaj, et al. It would have been obvious to one of ordinary skill in the art to modify the catalytic composition of Madaj, et al. to use the improved organometallic metal acetyl acetonate catalyst as disclosed in Simpson because the normal desire of scientists or artisans is to improve upon what is already generally known. *In re Peterson* 65 USPQ2d 1379 (CAFC 2003).
